Property Rental & Booking Platform

[Demo Link](#)

Dear Candidates,

We are pleased to inform you that you have successfully passed the first round of the selection process!! 🎉

Your application and skills have impressed us, and we are excited to move forward with you in the next stages. We are excited to have you explore this opportunity with us. This project is designed to assess your skills, creativity, and problem-solving abilities. It will help us understand how you approach challenges and your ability to deliver high-quality solutions.

Project Objective:

The Property Rental & Booking Platform helps property owners list rental properties and allows tenants to discover, book, and pay reservation fees online. The system includes role-based access control, property management, booking workflows, secure payments, review systems, and administrative moderation.

The platform connects tenants and property owners through a transparent and secure rental marketplace.

Ensure the Following things to get 100% mark (No mark will contain)

- Include at least 20 meaningful commits on the client side & 12 meaningful commits on the server side with descriptive messages.

- Include a README file with the project name, purpose, live URL, key features, and any npm packages you have used.
- Secure Frontend configuration keys using environment variables.
- Secure your MongoDB credentials using the environment variable.
- Create a design that encourages recruiters. Color contrast should please the eye & ensure that the website has proper alignment, space, and the website does not express gobindo design.
- If we found your project similar to any project of your module / conceptual / assignment. You will get 0 and may miss the chance of any upcoming reward.

Deployment Guideline

If your Deployment is not okay you will get 0 and may miss the chance of our upcoming rewards.

- Ensure that your server is working perfectly on production and not throwing any **CORS / 404 / 504** Errors.
- Ensure that your Live Link is working perfectly and that it is not showing errors on Landing in your system.
- ⚠ ensure that the page doesn't throw any error on reloading from any routes.
- ⚠ Logged in User must not redirect to Login on reloading any private route

Layout & Page Structure

The main section is dynamic and updates according to route changes.

Header

Dynamic Content

Footer

Authentication & Authorization

1. User Registration:
 - a. Form for users to sign up as users.

- b. Input fields: name, email, photo(you can use direct link or upload through imgbb as you want) and password.

Note: Don't worry about the standardization of the project, rather implement requirements as explained here)

2. User Login:

- a. JWT-based authentication.
- b. Token generation upon successful login to manage sessions securely.
- c. Implement social login functionality using Google (For social login by default you need to set the user role as a Tenant)

Hints: While implementing social login, ensure the system gracefully assigns the user role as a Tenant.

3. Role-Based Access Control:

- a. Middleware to check user roles and permissions.
- b. Protect routes to ensure only authorized users can access certain endpoints.

Role-Based Access Control

Roles:

- Tenant
- Owner
- Admin

Protect routes based on role permissions.

Main Tasks

Home Page (Public Route)

Navbar

Contains:

- Logo
- Website Name
- Home
- All Properties
- Login
- Register
- Dashboard (if user login)
- Logout (if user login)

Banner Section

The banner section should include a high-quality image, a compelling title, and a short, engaging description that introduces the page and highlights its main purpose.

Banner should include:

- Search Bar (Location, Property type, Max Price, Min Price)

Featured Properties Section

Show 6 approved properties using [MongoDB limit](#) in card layout.

If user is not logged in:

View Details → Redirect to Login

If logged in:

View Details → Property Details Page

Why Choose Us Section

Create a meaningful section highlighting platform benefits.

Customer Reviews Section

Show tenant reviews dynamically. (4 good review)

Extra Sections

Add at least 2 relevant sections.

Examples:

- Top Locations
- Recently Added Properties
- Rental Statistics
- Trusted Owners

Animation Requirement

Use Framer Motion in:

- Banner
- Featured Properties
- Review Section (optional)
- Extra Sections (optional)

Property Details Page (Private Route)

Displays detailed information about a specific Property.

Features

Add to Favorites - Tenants can save properties to their favorites list. When a property is added, it should be stored in the database and displayed in the **My Favorites** section of the tenant dashboard.

Book Property

Booking Process

Clicking Book Property opens booking modal.

Fields:

- Move-in Date
- Contact Number
- User Info
- Additional Notes

After confirmation:

Redirect the user to the payment page.

Payment

Use Stripe Payment Gateway.

After successful payment:

- Create booking record
- Save transaction
- Redirect to user success page

Booking Status:

- Pending (initial)
- Approved
- Rejected

Review System

Logged-in tenants can:

- Give Rating
- Write Review

Display:

- Name
- Email
- Date
- Rating

- Comment

All Properties Page (Public Route)

This page displays all available properties (**status should be approved**) in a 3-column grid layout using property cards. Each card showcases essential property information, allowing users to browse and explore listings easily.

Search

Search by:

- Location

Filters

- Property Type

Sorting

- Price Low to High
- Price High to Low

Backend filtering required.

Tenant Dashboard (Private Route)

Routes:

- My Bookings
- Favorites
- Profile

My Bookings

Show all currently login user booking items in a table format.

Columns:

- Property Name
- Booking Date
- Amount Paid
- Booking status
- Payment status

Favorites

Show all currently login user favorites items in a table format.

Actions:

- Remove Favorite

Profile

Every logged-in user (Tenant, Owner, Admin) should have a **Profile Page**.

Owner Dashboard (Private Route)

Routes:

- Owner Dashboard Home (Analytics)
- Add Property
- My Properties
- Booking Requests

Owner Dashboard Home (Analytics)

The Owner Dashboard Home serves as the analytics overview page for the currently logged-in owner.

Summary Cards

Display **3 summary cards** for the current owner:

- **Total Earnings**
 - ★ Sum of all successful booking payments received.
- **Total Properties**
 - ★ Number of properties created by the owner.

- **Total Bookings**

- ★ Number of confirmed bookings across all owner's properties.

Monthly Earnings Chart

Display a **line chart** ([react rechart](#)) showing the owner's monthly earnings for the last 12 months.

The chart data should be generated from successful booking payments.

Monthly earnings

Monthly earnings of the currently logged-in property owner.

Add Property

Fields:

- Property Title
- Description
- Location
- Property Type (dropdown)
- Rent (Price)
- Rent Type (Monthly, Weekly, Daily)
- Bedrooms
- Bathrooms
- Property Size
- Amenities
- Images
- Extra Features
- Status (Pending)
- Owner Information

My Properties

Show all currently login owner properties in a table format.

Actions:

- Update
- Delete

Status:

- Pending
- Approved
- Rejected

Booking Requests

Display all booking requests for the currently logged-in owner's properties in a table format:

- Tenant Information
- Property Information
- Booking Amount

Actions:

- Approve
- Reject

When owner rejects:

Booking status becomes Rejected.

Admin Dashboard (Private Route)

Routes:

- All Users
- All Properties
- All Bookings
- Transactions

All Users

Show all users in a table format

Actions:

- Change Role

Backend implementation required.

All Properties

Show all properties in a table format.

Actions:

- Approve
- Reject
- Update
- Delete

If rejected:

Admin: rejection modal must collect rejection feedback. Owners: see rejection feedback.

Owners can see rejection feedback. (See Challenges)

All Bookings

Show all booking items in a table format

Admin can monitor booking activities.

Transactions

Display:

- Transaction ID
- Property Name
- Tenant Name
- Owner Name
- Amount
- Date

Additional Requirements

- Add Requirement for Loading Page
- Add Requirement for Error Page
- Other requirements

UI Design Requirements:

- **Unique Design:** First, decide what kind of website you want to make. Then, search online or check out websites like ThemeForest to get ideas for the design. But remember, your website idea shouldn't be similar to any projects you've done before or to any examples in our modules or conceptual sessions.
 - ★ You can also look for free resources on [blogs](#) to help with your website.
1. Keep the main heading style (font, size, color) consistent across all sections.
 2. Keep paragraph spacing balanced and text easily readable.
 3. Maintain uniform image sizes and spacing.
 4. Use the same button style as on the home page.
 5. Ensure good spacing and proper alignment.
 6. Navbar, Keep the heading/logo same style and size as on the home page.
 7. Use a grid layout with equal image sizes.
 8. Keep all cards equal height and width (especially in services, projects, or products section)
 9. Use the new X logo instead of the old Twitter bird to match the latest rebrand
 10. Responsiveness: Make it responsive for all devices, including mobile, tablet, and desktop views.

Dashboard UI Requirements:

- Responsive design for mobile and tablet screens

- Consistent color theme
- Full-width dashboard
- Charts and graphs for quick data visualization
- User profile section

- <https://codecanyon.net/?srsltid=AfmBOooRoUfeK7IOROpchCuA4hPVj5P9WRmtDQJ9K0E6Yhf4VTrHhXKt>

Challenge Requirements

1. Use JWT token to protect api's.
2. Pagination on minimum 2 pages.
3. All search and filter implementation from backend.
4. The owner can view rejection feedback for a specific rejected property by clicking the view () button in the property's status column.

What To Submit

Admin Email:

Admin Password:

Front-End Live Link:

Client Repository Link:

Server Repository Link:

Optional Requirement

- **Download Monthly Earnings Report (PDF):** Allow property owners to download a PDF report containing their monthly earnings and booking summary.
- **Dark / Light Theme Toggle:** Implement a theme switcher that lets users seamlessly switch between dark and light modes.
- **Share Property:** Enable users to share property listings through social media platforms or by copying a direct link.
